UK lineages summary report

This report gives summaries of UK specific lineages for week 2020-05-22. There are time lags due to batching, curation and analysis, the most recently sampled sequence is 2020-05-17. The analysis (eg time since last sample) is therefore undertaken from this date. 16506 sequences in the UK have been included in this analysis. 5142 lineages have been recorded, 4111 of which only contain one sequence.

A few notes: the size of a lineage may be due to a low amount of transmission of this lineage, but it is likely also that it just hasn't been sampled as frequently, especially for newer lineages. It's also important to realise that these lineages are *estimates* of how we think the virus is spreading in the UK after being introduced from abroad, as the low evolutionary rate of the virus makes it difficult to separate lineages with certainty.

The minimum number of introductions is 5185 and the maximum is 8310

Sequences which were replicates or too error-prone were removed from this analysis.

4798 are lineages which only contained five sequences or fewer, and so have been left out of visualisation in the interests of clarity

Furthermore, those sequences which haven't been sampled in the last month are not shown.

Of the 210 that remain: 135 are pending extinction, ie last seen three weeks ago. 32 lineages have gone quiet, ie haven't been seen this week. 21 lineages have reactivated. 22 lineages have been continuously circulating.

The following table contains information about lineages and the number of sequences in each country in the UK for each lineage, in reverse size order.

Each entry is the count of sequences from each lineage in each country, with the percentage of the total sequences from that lineage that this count represents.

The global lineages are correct as of the data release on 2020-05-19

It is written to "summary_files" as "lineage_summary.tsv" for further use, and the full list of lineages is available in the same directory as "all_lineages.csv"

| Lineage name | England | Wales | Scotland | Northern d Ireland | Date range | Total sequences | Global lineage | Time since last sample (days) |

These data is represented in the stacked bar chart below. Note that the number of sequences is likely to be due more to differing sampling efforts in different regions, rather than genuine differences in numbers of cases.

The raw data for this bar chart are in the table above.

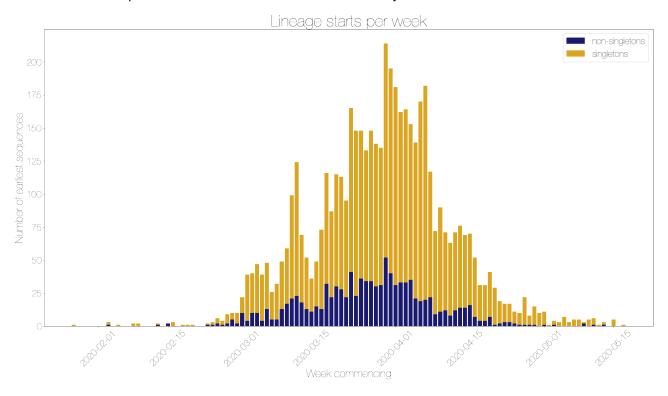

The relative growth and decline of the ten most sampled lineages in terms of number of counties they are present in is shown below. The raw data for the plot is shown below it, with each column representing a lineage, and the number of admin2 regions it is present in in each week.

| Week commencing | UK5 | UK225 | UK7 | UK61 | UK1 | UK36 | UK9 | UK106 | UK4 | UK52 |
|-----------------|-----|-------|-----|------|-----|------|-----|-------|-----|------|

These lineages are shown on the timeline below. Each line represents the length of the cluster, from oldest to most recent sampling date. The dots are sized by the number of sequences taken on that date, and again are colour coded by country. The raw data has been written to a summary file.

The map below shows the number of sequences sampled in each admin2 region in the UK. The colour scale is the same for all four countries, but with different underlying base colours.

COVID-19 sequences from each Admn2 region UK

| Admin2 | Country | Number of sequences | Sequence group |
|----------|----------|---------------------|----------------|
| ABERDEEN | Scotland | 21 | 10-50 |

| Admin2 | Country | Number of sequences | Sequence group |
|------------------------------|------------------|---------------------|----------------|
| ABERDEENSHIRE | Scotland | 0 | 0 |
| ANGLESEY | Wales | 18 | 10-50 |

There are some sequences with locations that are not matched to real Admin2 regions, some manual curation required.

Other results modules for UK lineage analysis can be added in here if required.

Appendix

The plot below shows the number of sequences from each country that don't have specific enough location data to plot on the map.
